

Kodicom CMS

(Central Management System)

Why CMS?

Kodicom CMS (CENTRAL MANAGEMENT SYSTEM) is an integrated security management system that provides a useful solution for central monitoring station operation.

CMS can provide total center-control monitoring solution for various big security installations that need protection and monitoring.

For example, in a football stadium, numerous CMS Surveillance Systems may be connected with hundreds of cameras and integrated with IR sensors, motion sensors, fire detectors, alarms, and POS systems by network. Furthermore, it is possible to assign multilevel users to restrict and control all surveillance areas.
